Abstract (en)
[origin: WO2007014000A2] Certain embodiments provide a system and method for adaptable control and configuration of a gaming environment. Certain embodiments provide a gaming environment configuration system including a plurality of gaming terminals capable of executing games for play by one or more players and a configuration manager configured to receive information regarding available games and the plurality of gaming terminals. The configuration manager generates one or more configurations for the plurality of gaming terminals. The configuration manager may be configured to pause reconfiguration of a gaming terminal based on gaming terminal status. In an embodiment, the system also includes a certificate manager for authenticating access to a game for play on a gaming terminal. Additionally, the system may include a game database server including a plurality of games for play at one or more of the plurality of gaming terminals.
