Abstract (en)
[origin: WO2007010392A2] Toe-piece for ski bindings comprising a fixed support base (100) having two jaws (123) with respective end pins (124) , able to rotate about an axis (122) substantially perpendicular to the support base (100) so as to pass from an open position into a closed position for locking the toe (1a) of a ski boot, said jaws (123) having a resistance arm (123a) co-operating with actuating means (310) able to rotate about an axis (320) perpendicular to the support base (100) against the opposing action of resilient means (210, -1210) integral with the said toe-piece, said actuating means (310) being constrained to a sliding piece (350) able to be displaced in both senses of the longitudinal direction (Y-Y) upon operation of associated control means (410,420) , so as to cause opening/closing of the two jaws (123) .
