Abstract (en)
[origin: CA2616668A1] A purely mechanically acting incorrect-refuelling arrangement (10) for a filler nozzle of a tank has a receiving element (15), the components of which can be forced radially apart from one another, at least on opposite wall regions, from the interior (24) thereof, and a flap (25), which is arranged on the outlet side of the receiving element, covers the receiving element (15) with locking action in the rest state and, when the components of the receiving element (15) are forced apart from one another, is unlocked and can be opened under pressure.
