Abstract (en)

[origin: WO2006119741A1] The invention relates to an adjustable armrest for an occupant of a vehicle, with an armrest device (2), the armrest device (2) having an elongate spatial shape, extending in a longitudinal direction (3) laterally next to the occupant and, in a first end region (4), being mounted such that it can pivot upwards and downwards relative to the occupant about a pivot axis (10) transverse to the longitudinal extent of the armrest device (2), and being operatively connected to at least one driving device (14) for pivoting the armrest device (2) about the pivot axis (10), the pivot axis (10) being arranged at an inclination with respect to a horizontal direction (9), so that, when pivoting about the pivot axis (10), the armrest device (2) can also be moved in a transverse direction (9) towards the occupant or away from him.
