Abstract (en)

[origin: WO2007004984A1] In an arrangement in a vehicle for automatically setting settable vehicle functions (SU1, SU2 ... SUn) in accordance with previous settings for a user of the vehicle, a tachograph 5 (1) that is connected to a vehicle internal bus (6) is adapted, in response to insertion into the tachograph (1) of an authorization card (4) with a user specific code, to supply the user specific code of the inserted card (4) to the vehicle internal bus (6). Separate control units (ECU1, ECU2 ... ECU<sub>n</sub>) associated with the respective settable vehicle function (SU1, SU2 ... SUn) are connected to the vehicle internal bus (6) to receive the user 10 specific code. Each control unit (ECU1, ECU2 ... ECU<sub>n</sub>) is adapted to check, for each card (4) inserted into the tachograph (1), whether the user specific code of the card (4) and any setting of the corresponding, settable vehicle function (SU1, SU2 ... SUn) for the user are recorded in the control unit and, if that is the case, to set the settable function (SU1, SU2 ... SUn) as recorded and, if that is not the case, to record the user specific 15 code and any setting of the settable function made for the user while the card (4) is in the tachograph (1). (Fig. 1)
