Abstract (en)

[origin: WO2007011280A1] A device is disclosed for controlling the operation of a washing and/or drying machine where the operation is defined by values of a set of quantitative operation parameters for the machine. The device comprises input means and a processor. The input means are arranged such that a user can select amongst a set of weightings between three or more qualitative operation parameters. The processor is arranged to determine values of the set of quantitative operation parameters from a user selected weighting, and to control the washing and/or drying machine according to the determined values .
