Abstract (en)

[origin: WO2007012653A1] The invention concerns an architecture with software components for application with execution platform providing access to metaprogram, and in particular for developing and executing man-machine interfaces. The invention is characterized in that it consists in an architecture with components (2, 3) explicitly defining all the characteristics of the components, without practically intervening on the code defining said components, managing said components during their execution, and providing them with technical services, and in that it comprises a generic container (1) receiving the components (2) whereof the definition is derived for specifications of the application to be carried out and depends on the field of use of the application, said container receiving as well technical services provided (3).
