Abstract (en)

[origin: WO2007012752A1] The invention concerns a driving device (5) for each mobile prism-like member (4) of an advertising board comprising: a vertical axis (50) integral with a pawl (55) co-operating with a drum (51) including on its periphery three fingers (52, 53 and 54) designed to be urged into contact with a cam (70) of a module (7) for driving the vertical shaft (50) about a vertical axis of rotation xx'; a housing (6) wherein is accommodated and guided the vertical shaft (50), the pawl (55) and the drum (51) such that the vertical shaft (50) emerges above the upper wall (26) of a metallic crosspiece (20) forming the frame of the advertising board so that said vertical shaft (50) co-operates with the corresponding mobile member (4), and load recovering means (58, 59, 10) for maintaining the kinematics of working clearances along the vertical axis of rotation xx'.
