Abstract (en)  
[origin: WO2007009831A1] In an antenna array, in particular for diversity operation, a cohesive radiofrequency-conductive area (1) is provided, to which switchable impedances (7) are coupled in highly resistive fashion. In order to output the antenna signals, at least one tap point (6b) is provided in particular at a highly resistive point at the outer edge of the conductive area (1).
