Abstract (en)

[origin: WO2007009936A2] Cylinder for driving and heating strips of plastic material during production, characterized in that the said cylinder (2) is supported rotatably by special means at one of its ends, so that the whole length of its inner side surface is free and available for being heated by an adjacent radiating structure inside the cylinder, which is electrically powered and fixed, so as not to require the use of rotating joints.
