Abstract (en)
[origin: EP1908386A2] The nozzle has a tube-like nozzle section (8) with a slit in areas of its free ends to form half tubular nozzle sections (10) that are swiveled relative to one another to change a tube-like joint nozzle to a surface nozzle. Bristles are displaceably arranged in the suction nozzle. The sections (10) are opened up to 180 degrees in a spreading position. Conversion of the section (8) to the sections (10) is formed by a flexible cover.
