Abstract (en)

[origin: EP1908549A1] The device has a protective cover (12) partially surrounding a grinding tool with a base body and provided with a protective cover neck that is connected with the base body. The cover is detachably fixed at a flange (20) by a locking lever (18) in a rotation position, and the locking lever engages an opening in the protective cover with a locking cam. A swiveling axis of the locking lever is arranged parallel to the output shaft, and the openings are arranged in the protective cover neck of the protective cover.
