Abstract (en)
The invention relates to a deformable part for reducing the effect of frontal impacts in vehicles formed by a sheet metal profile which, in a sectional view, has a curved central section (1) limited between first identical and symmetric converging straight sections (2), followed by second also respectively identical and symmetric diverging straight sections (3); the edges separating the curved central area of the areas corresponding to the first straight sections being crossed by openings (6) partially extending over both areas in the transverse direction.
