Abstract (en)

To ensure the adhesiveness and thereby the closing function of a flap (4) on a package (1), the flap is manufactured such that when it is pulled from the package material (3), the adhesive (7) and the welding layer (12) are moved to the package material (3), at the same time as a stamped groove (9) on the package (3) produces a portion (11) which corresponds to the opening (6), and which adheres to the flap (4) and thereby provides the opening (6) on the package. Hereby, the flap (4) is not adhering after the opening, thereby ensuring the adhesiveness when the package is reclosed, since adhesive (7) is not exposed to touch by the fingers or by the packaged material when this is taken out of the package.
