Abstract (en)
The rotating knob has a handle piece (11,21), which is deep-drawn metal, and another handle piece (12,22) is provided, which has recessed grip where the two handle pieces are detachably connected with each other for forming the knob. The former handle piece is a front particularly cylindrical part, and the later handle piece is arranged behind the former handle piece. A preload device is provided for prestressing the former handle piece in the position connected on the later handle piece, against the later handle piece for preventing a visible gap between them. Independent claims are also included for the following: (1) a kit with an electronic lock cylinder and a tool for opening a bayonet closing (2) a method for developing a knob.

Abstract (de)
Die vorliegende Erfindung betrifft einen Knauf (1, 2), insbesondere für einen elektronischen Schließzylinder (42), sowie ein Verfahren zur Anbringung eines solchen Knaufs an einen elektronischen Schließzylinder. Der erfindungsgemäße Knauf weist ein erstes Griffteil (11, 21) auf, welches aus Metall tiefgezogen ist und ein zweites Griffteil (12, 22), wobei das erste und das zweite Griffteil für das Bilden des Knaufs (1, 2) miteinander verbunden sind.
