Abstract (en)
Catching device for a door leaf, in particular sectional door leaf, comprising at least one catching member (2) being displaceable between a release position and a catching position for engagement with a door frame element (50), biasing means (4) for biasing said catching member (2) towards said catching position, at least one first lever (6) and at least one second lever (8) adapted to be mountable to a tensioning means (52) near or at its first end portion, wherein said catching member (2) is rotatably mounted to said first and second levers (6,8) such that displacement of said second lever (8) causes said catching member (2) to displace between said release and catching position.
