Abstract (en)

[origin: EP1908915A2] The method involves assembling a winding shaft (30) without a rolling gate hanging (10) at the assembly position. An upper final range of the rolling gate hanging is lifted on the winding shaft by assembly drawing device and by rolling assembly drawing device on the winding shaft. The rolling gate hanging is rolled on the winding shaft. The assembly drawing device remains between the rolling gate hanging and the winding shaft. An independent claim is also included for a rolling gate, which has rolling assembly drawing device.
