Abstract (en)

The pump has a casing plunged into a fluid. A centrifugal wheel (28) is provided on the casing. A coaxial electric motor (16) surmounts the centrifugal wheel. A stator is integral with the casing. A rotor is integral with a shaft (22), which is coupled to the centrifugal wheel. An axial balancing system (60) is defined by a fluid circulation circuit provided between the centrifugal wheel and the casing. A fluid cooling circuit (90) is provided for the motor and a rolling bearing. A supply circuit of the axial balancing system is independent of the cooling circuit.

Abstract (fr)

Circuits de circulation auxiliaire du fluide dans la pompe pour l'équilibrage axial et le refroidissement de certaines parties de la pompe. La pompe comporte une zone centrifuge (28) avec un système d'équilibrage axial (60) fluidique et le circuit d'alimentation de ce système d'équilibrage est indépendant du ou chaque circuit de refroidissement fluidique (90, 50, 48, 52, 86) de certains éléments de la pompe tels que le moteur (16) et/ou un roulement (38).
