Abstract (en)

[origin: DE10307842A1] Decoupling device for mounting a shaft, especially a shaft of a spherical-disk-shaped enveloping gear operating with a chain as the enveloping device, on a base body (8) has an outer bearing ring (4) having a circular cylindrical outer surface (14) and inside which the shaft is mounted, and an inner surface (16) surrounding the outer surface and rigidly connected to the base body. At least one radial ondular washer (18a) arranged between the outer surface and the inner surface allows restricted relative radial movement between the inner surface and the outer surface under elastic deformation. Independent claims are also included for radial ondular washers.
