Abstract (en)
[origin: EP1909359A2] The clamping connection (10) has a clamping spring (12) acts on the conductor end for clamping the conductor end on a support. The clamping connection comprises a bus bar (102) with a connecting end (112) and a discharge area (114), which is connected on it. The bus bar on the connecting end has a window-type recess (116) with a supporting edge (118) and has a clamping edge opposite to the supporting edge at the intersection of the connecting end in the discharge area. The clamping spring has a support shank (212), with which it is supported at the supporting edge of the bus bar. Independent claims are also included for the following: (1) a connecting terminal arrangement in a clamp connection area of an installation switch device with a clamping connection (2) an installation switch device with two shell-shaped housing parts.
