Abstract (en)
[origin: WO2007010579A1] A device (1) for administering fluids in nebulised form comprises a bulb (2) in which a collection chamber (3) for the fluid to be nebulised is formed and a duct (4) , one end (5) of which may be connected with a compressed gas supply, extending through the bulb (2) and bearing, at its opposite end, a nebulisation nozzle supplied via a riser (18) extending into the chamber; the duct extends beyond the chamber with the nozzle disposed at a distal end thereof with respect to the chamber.
