Abstract (en)
[origin: WO2007006361A1] The invention relates to a blade head (2) which comprises a disk-shaped blade carrier (4) and a plurality of bar blades (6) having blade shanks (20). The disk-shaped blade carrier (4) comprises a plurality of blade holders (10) in which the blade shanks (20) of the bar blades (6) are inserted. The blade shanks (20) have a cross-section in the shape of the segment of a circle. The aim of the invention is to allow the bar blades (6) to be secured in the blade holders (10) in a simple and secure manner. For this purpose, the blade holders (10), complementarily to the blade shanks (6), have a cross-section in the shape of the segment of a circle so that every bar blade (6) with its blade shank (20) accurately fits into the blade holder (10). The bar blades (6) are non-positively secured via clamping screws (22) exclusively which press the bar blades (6) against the holders.
