Abstract (en)

[origin: WO2007003174A1] The invention relates to a printing system for controlling the printing head of a conventional printing cartridge designed for water-based printing ink. Said printing head comprises ink discharging elements arranged in a matrix, and the actuatable heating element of an ink discharging element is activated by means of an address signal operating as a line signal and by means of a starting signal operating as a column signal. The starting pulses of the starting signal (SS2) have a lower signal amplitude than the address pulses of the address signal (ASI) and the printing ink in the printing cartridge (5) has a high alcohol content.
