Abstract (en)
[origin: DE102005029221A1] Adhesive, preferably for gluing conductive material, comprises at least one adhesive component and fillers, where the filler contains fibers or a fiber-powder mixture and the fibers and/or the powder are made of an electrically conductive material. An independent claim is included for a compound comprising sputtering target material and a carrier material, where the sputtering target material is adhered on the carrier material and the adhesive space is bonded by an adhesive component.
