Abstract (en)  
[origin: WO2007017337A1] The invention relates to a failure identifying and analysing system for a technical plant, wherein said system is designed for automatically and/or manually identifying failures and state data items and/or data items of processes related to a failure are recorded in order to be used for conditioning future failures in such a way that they make it possible to monitor the technical plant, detect the failures, automatically identify the cause thereof and to carry out a statistical and/or systematic analysis of failures.
