Abstract (en)

[origin: WO2007008182A2] The present invention relates to a control button (1), which provides the necessary gas or electricity to burn a cooker, and diminishes or increases the gas- or electricity-flow amount to adjust the flame intensity of the same in electricity- and gas-based cookers, which further comprises a body (2), an eccentric element (7) placed interior of said body (2), a slot (4) provided on said eccentric element (7), a locking tongue (6) displacing together with said slot (4), a displacing element (10) displaceable in said slot (4), a guiding element (9) formed on said displacing element (10), a spring (8) in connection with said displacing element (10), a fixation piece (3) formed to prevent said displacing element (10) from springing out from said slot (4), and a safety piece (5).
