Abstract (en)  
[origin: FR2889362A1] The system has two antennas constituted of a common arm (10) comprising an upper part (10a) and a lower part (10b) to form a cover for an electronic card permitting to process signal received by the antennas. One of the antennas has an arm (11) oriented along the horizontal, and other antenna has an arm (12) oriented along the vertical with respect to the arm (10). The arms (11, 12) are rotationally mounted at an end of the arm (10). An independent claim is also included for a support for a diversity dipole antenna system.
