Abstract (en)

[origin: WO2007018380A1] An apparatus and method for providing multiple screens is disclosed. The apparatus includes a user/application interface module receiving a PiP service providing mode, and an output module displaying a video component of a service on a main screen if the PiP service providing mode is a first mode and displaying a background video or the video component of the service on a PiP screen if the PiP service providing mode is a second mode.
