Abstract (en)  
Sport action control and assessment device, particularly one that is applicable to competition games using a ball (5) that must cross or hit an enclosed space (6) to simulate or obtain a game point, wherein enclosed space (6) is controlled by means (4) sensing the presence of ball (5), which detect and hold in an inspectionable memory the spatial characteristics of the point at which ball (5) has reached and crossed said enclosed space (6). Enclosed space can allow the free passage of the ball, like the corresponding goal posts used in football, handball, hockey, water polo and rugby or not allow it, like in tennis and fronton. The sensory optical means are electronic apparatuses such as photoelectronic, photographic, video cameras, scanner or photoelectric cells.
