Abstract (en)
[origin: EP1911581A2] The ink dosage device has an offset rotary printing unit. The color dosage of offset printing color is carried out in the offset rotary printing unit. The offset rotary printing unit comprises a plate, rubber and impression cylinder, and is carried out by a rotating operating screen printer (1) with a scraper (2), which lies inside. The color dosage takes place through a rotating operating screen printer with a scraper or multiple scrapers attached to the lateral surface of the screen printer. Independent claims are also included for the following: (1) a method for operation of ink dosage device (2) an offset inking system with an ink dosage device.
