Abstract (en)

[origin: EP1911833A1] Described is a solid washing agent for dishwashers or laundry washing machines that has high storage stability also in wet and preferably also hot environment and therefore can be placed within the washing machine once for several washing cycles if desired. Said solid washing agent in general is in tablet, granule or bead form and comprises a carrier and therein incorporated active substances that at least comprise a builder. Said carrier is a solid, water-soluble matrix that is tight against water and humidity, and preferably results in a washing agent that is dimensionally stable at intended washing temperatures.
