Abstract (en)  
The method involves flowing through flow medium through inner lying bore channel surfaces, where the through flow medium does not flow through outer surfaces of a perforated brick. The flow through medium is utilized in solid, liquid and/or gaseous state of aggregation or in a combination of same or different states of aggregation or foam. The flow through medium changes the surface structure of the bore channels. Extruded ceramic masses are used with bore channels.

Abstract (de)  
Verfahren zur Relativbewegung von Durchströmungsmedium und Lochstein, wobei im Wesentlichen nur die innen liegenden Lochkanalflächen durchströmt werden, nicht jedoch die Außenflächen des Lochsteines.
