Abstract (en)

[origin: EP1911960A2] A filter hose (6) is provided with a purifying filtration coating (11) on the diverting side (14) of the filter wall, made from polymeric or synthetic material nano-fibers. The diameter of nano-fibers is less than 1 micro meter or within the range between 50 and 500 nano meters. The thickness of the coating is small compared to the radial thickness of the filter hose wall. An independent claim is also included for a method for production of a filter mechanism.
