Abstract (en)
[origin: WO2007010343A1] The present invention relates to a sock (200) advantageously provided with at least one band (206) having a first end (207) attached to a part of the sock that stretches from the user's heel to the knee and a second end (208, 209) that can be removably secured to the sock. The band wraps around the heel area of the sock and it extends at least partially to where the user's lateral malleolus (205) is located. The sock has an anti-sprain function and is suitable for practicing sports or for the therapeutic or post-traumatic treatment of the user.
