Abstract (en)

[origin: WO2007019993A1] The invention relates to a sensor device comprising a base unit which consists of an oscillating circuit locating system (12) provided with at least one transmitting and/or receiving location selecting element for locating by electromagnetic waves and a sensor element (5) comprising a location oscillating circuit for marking a detectable locality which makes it possible to transmit additional information. For this purpose, the sensor element (5) is provided with an encoding unit for transmitting encoded information.
