Abstract (en)

[origin: WO2007012319A1] The invention relates to the preparation of a salt in acetonitrile, characterised in that the acid component of the salt is an organic acid which boils at less than 300 °C under normal pressure, the base component of the salt is a base which boils at less than 300 °C under normal pressure, an organic acid which boils at less than 300 °C under normal pressure is added in a quantity of up to 1 vol. %, in relation to the volume of acetonitrile, and the water content, that can be determined by Karl Fischer titration, is below 5 %.
