Abstract (en)

[origin: WO2007014948A1] The invention relates to a method for recording data in the memory unit (1) of a control system of a motor vehicle, wherein data items are first distributed between several modules (A1, A2, A3, ..., D1, D2, D3) according to the properties thereof, said modules are prioritised and the available memory (2) of the control system is filled with data according to the sequence of the module priorities. Said invention makes it possible to optimally use the control system memory unit for a better error diagnosis.
