Abstract (en)

[origin: WO2007017304A1] The invention relates to an electronic appliance for triggering audio signals on the basis of digital signal processing. According to the invention, the electronic appliance comprises at least one means for monitoring the audio signal with regard to the parameters working gain and peak gain and for automatically adjusting the working gain of the audio signal. The invention also relates to a computer programme and to a computer-readable storage medium.
