Abstract (en)

[origin: EP1914143A2] The sliding door is designed as a single-leaf slot inner sliding door, where the sliding door works together with a portal lining (2). The portal lining is implemented removably from an outer side of a rail vehicle. A door leaf of the door is retractable from a closed position for the opening of a transition into a door slot (10) of a railcar body, where the door leaf is held in corresponding guides or guide rails.
