Abstract (en)
[origin: EP1914187A1] Vertical lift, especially for the disabled, comprises a safety device (5) in the form of a blind with telescopic walls that is guided on a load-receiving device (1) moved by a movement device. The safety device closes the entrance to a region (B) below the load-receiving device on at least one side of the lift. Preferred Features: The safety device is fixed at both ends (5.1, 5.2). The entrance to the region below the load-receiving device is closed on at least two sides of the lift by the telescopic walls.
