Abstract (en)
The invention is a new outdoor framework structure, of the so-called "Sivigliana" type, with uprights (M) supporting one or more main cross members (TX) and secondary cross members (TY), integrally attached to one another by means of one or more "T" joints (GT) and/or cruciform joints (GC). Said "T" joints (GT) are integrally attached to said uprights (M) and are suitable for containing and supporting said main cross members (TX) in a substantially horizontal position. Said cruciform joints (GC) are suitable for supporting said secondary cross members (TY) in a position substantially crosswise or orthogonal to said main cross members (TX). Said outdoor framework structure comprises one or more winding rollers (V) for vertically-sliding side sheets and one or more vertical profiles (C) or guides (TG), wherein the ends of the terminal rods of said side panels are slidingly engaged. The ends of said cross members (TX) and (TY) are each plugged with a cap (P).
