Abstract (en)

The line has a temperature sensor emerging inside a catalytic converter that includes two envelopes (48, 49) integrated to each other by fastening clips (48A, 49A), where the envelope (49) contains a particle filter (47). The fastening clip (48A) serves as a mounting base to the temperature sensor. The clip is pierced of bore (48C) that houses a base (76) of the sensor. The clip (48A) is placed with respect to the filter such that the sensor emerged between an oxidation catalyst (46) and the particle filter is close to the filter.

Abstract (fr)

L'invention concerne une ligne d'échappement de gaz brûlés d'un moteur à combustion interne comprenant un pot catalytique et une sonde de température (75) débouchant à l'intérieur du pot catalytique, le pot catalytique comportant deux enveloppes (48, 49) solidarisées l'une à l'autre par deux brides de fixation (48A, 49A), l'une des deux enveloppes contenant un filtre à particules (47). Selon l'invention, la bride de fixation de l'autre enveloppe sert de support de montage à ladite sonde de température.
