Abstract (en)  
A vehicular light emitting diode connector includes an outer case (1), an inner case (2), a first signal wire (3), and a second signal wire (4). The outer case (1) comprises an open end (11) and a compartment (13). The inner case (2) is inserted into the compartment (13) of the outer case (1) and has a through hole (21) therein to form a first open end (22) and a second open end (23). The first signal wire (3) is secured to the inner wall of the first open end (22) of the inner case (2), and the second signal wire (4) is secured to the outer case (1).
