Abstract (en)
[origin: WO2007020285A1] The invention relates to a printing machine system with: a first printing machine (01), which has at least one first printing unit (02) and a first funnel structure (07), which is arranged in a machine escape (M1) of this printing unit; a second printing machine (31), which has at least one second printing unit (03) and a drier (15), which is arranged in a machine escape (M2) together with this printing unit, and; a second funnel structure (17). The first and second funnel structures (07, 17) differ in a number of formers (09, 09', 19, 19'), which are placed next to one another in a machine plane, and/or in an effective width of one or more folders (09, 09', 19, 19'). A web (21) or partial web (21.1, 21.2) printed by the second printing unit (03) and guided through the drier (15) can be either guided to the second funnel structure (17) or to the first funnel structure (07) that differs from the second funnel structure in number and/or width.
