Abstract (en)

[origin: WO2007019980A1] The invention relates to a method for deactivating an automatic starting function of a distance-related speed regulating system in a motor vehicle (EV). According to said method, the speed regulating system performs a distance-related regulation on a detected target object (VF) and the motor vehicle is maintained at a standstill according to the stationary target object. According to the invention, the automatic starting function is automatically deactivated if a mobile object (F) is detected between the stationary target and the motor vehicle.
