Abstract (en)

[origin: EP1916066A1] The positioning device has release switching for a hand operated placing tool (10) operated by a release element (13) with a connecting unit (22) for the placing tool. A mechanical switch line (30) is provided from an actuating element (24) of a handle (21) to the releasing element for the releasing agent. A safety device (40) has a gravitation controlled intermediate element arranged between two actuators (34) of the switch line, which is positioned in a release switching state between the two actuators and which intercepts the switch line in an intercepting position.
