Abstract (en)

System to fix expansive fiber bale and bale with applied system applicable to expansive fibers in general, such as a. g. cotton, wool, cork and other similar materials which fibers are naturally expansive, which should be compacted for transport and storage; to compose the expansive fiber bale (1), a conventional press (2) which can be provided with different numbers of trays (3) is used; the system requires the use of a press (2) in which a given volume of expansive fibers compressed and compacted to form the expansive fiber bale (1), being the press (2) plates provided with a number of trays (3); the system includes plastics. bands (4) developing paths defining parallel (P) and crossed (C1) contours, forming sections (8) at each given quantity of trays (3); the system allows to obtain an expansive fiber bale (1) from the operation of the press (2) which plates define trays (3) in confronting positions, so to configure with the press (2) a folding side (L) and feeding side (L1). The resulting bale (1) is an expansive fiber bale fixed by plastic bands applied to corresponding trays (3), following as many sections (S) as required, following parallel and crossed contours and with the locking of said plastic bands (4) being assured by claw type edges (5) always inserted between a band (4) and the bale (1), being the location of said edges (5) inverted at the two ends defining each section (S).
