Abstract (en)

[origin: EP1916335A1] The present invention relates to a tissue paper product having one or more plies of tissue paper, of which at least one ply has a lotion, characterised in that the lotion comprises silk proteins. The present invention is based on the realisation that the film-forming properties of silk proteins can be used to control the paper dust formation of tissue paper products. Silk proteins furthermore have various properties which make them a valuable component of lotioned tissue paper products.
