Abstract (en)

[origin: EP1916373A2] The wall (1) has sliding wing (2) with a telescope rail comprising rail sections (4-6) that are guided adjustably with one another. The section (4) is fastened to the wall in an extended condition as a foot section of the rail along a top edge of a door opening that is formed in the wall. The section (6) is freely suspended as an end section of the rail along the top edge so that a gap is formed between a lower edge of the wing and floor. The section (5) is self supported at the foot section, and the end section is self supported at the center rail section in the extended condition.
