Abstract (en)

[origin: EP1916378A2] The device (D) has carrying units (P) carrying a shaft (2) of a roller blind (V) towards ends of the shaft. Each carrying unit is positioned relatively at an associated slide and supports the shaft and the roller blind in projection towards the exterior of a room of a building. A resumption unit (A) resumes an effort on a side of a woodwork (M), and a connection unit connects the resumption unit and the carrying unit for adjusting a gap between the carrying units.
